

INVESTMENT OBJECTIVE

The investment objective of the Inflation-Protected Securities Portfolio is to provide inflation protection and earn current income consistent with preservation of capital. Ordinarily, the Portfolio will invest at least 80% of its net assets in inflation-protected securities issued by the US government and its agencies and instrumentalities. Generally, the Portfolio will purchase securities with maturities of between five and twenty years. The Portfolio will not shift the maturity of its investments in anticipation of interest rate movements and ordinarily will have an average weighted maturity, based upon market values, of between three and twelve years.

PRINCIPAL RISKS

The principal risks associated with this investment include market risk, interest rate risk, inflation-protected securities interest rate risk, credit risk, risk of investing for inflation protection and income risk. These risks are described in the Principal Risks section of the prospectus, available at dimensional.com.

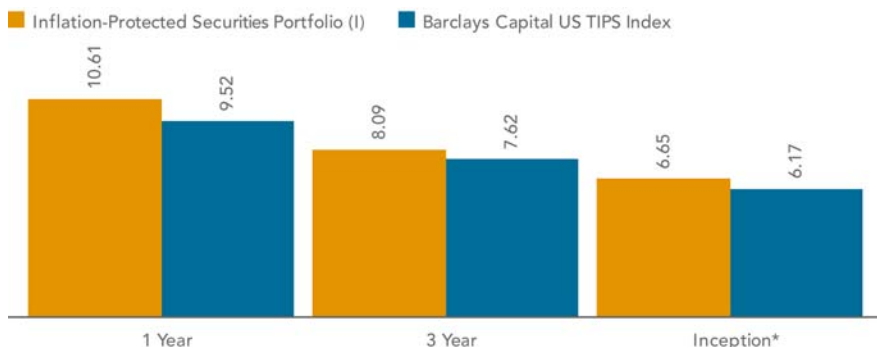

*Index return from first full month after fund inception.

FUND COSTS

Total Operating Expense Ratio	0.16%
Net Expense Ratio (to investor)	0.16%

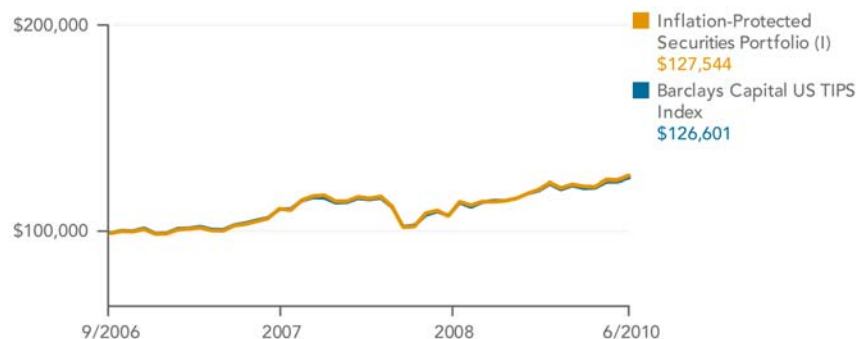

Annual expense ratio as of 10/31/2009. Dimensional has contractually agreed to waive certain fees and assume expenses for a one-year period set to terminate on March 1 unless renewed. Dimensional may seek reimbursement for amounts previously waived under the conditions outlined in the prospectus. The fund's prospectus contains more complete information on risks, advisory fees, expense reimbursements, and other expenses.

AVERAGE ANNUAL TOTAL RETURNS (%)

Past performance does not necessarily indicate future performance. The investment return and principal value will fluctuate so that an investment's shares, when redeemed, may be worth more or less than their original cost.

GROWTH OF \$100,000

Inflation-Protected Securities Portfolio

ABOUT DIMENSIONAL

Working years ahead of the industry, Dimensional has forged a new way to invest based on the dimensions of risk and return identified by financial science. The firm inaugurated its strategies in 1981 with early research into the stronger performance of small cap stocks. Later, a comprehensive analysis of stock prices worldwide deepened the strategy repertoire and set a new standard for portfolio design. This evolution reflects an abiding belief in the efficacy of capital markets.

PHILOSOPHY

Fixed income securities expand the opportunity of investors to participate in the performance of capital markets and provide a more reliable source of income than other asset classes. Because bonds behave independently from equities, adding fixed income to a portfolio can improve overall diversification. Dimensional believes the risk and expected return of fixed income securities are related and that broad diversification is crucial in capturing the fixed income risk factors.

PORTFOLIO CONSTRUCTION

The Inflation-Protected Securities Portfolio is managed to provide diversified exposure to US Treasury inflation-protected securities while maintaining an average weighted maturity of three to twelve years. The portfolio employs a constant-maturity, low-turnover approach, generally investing in securities with maturities between five and twenty years. Investments are made in inflation-protected securities issued by the US government, its agencies, and instrumentalities.
